

In the Abstract of th Inv ntion

Please replace the Abstract of the Invention found at page 28, line 3, with the following rewritten paragraph:

915 A tonneau cover apparatus for attaching a flexible cover about a cargo box of a vehicle, preferably a pickup truck. The apparatus preferably includes, a support frame removably attached about the perimeter of a cargo box of the vehicle, an elongated end plate attached to an end of the flexible cover, and an end plate engagement member attached to the support frame, preferably one on
920 each side of the support frame, and a locking member movably attached to the end plate. The end plate is preferably attached to an end of the flexible cover and is configured to cooperatively engage and pivot with respect to the end plate engagement member or members and into and out of a fixed stretching position wherein the flexible cover can be correspondingly be tensed and relaxed. The
925 end plate may be retained in the fixed stretching position by the locking member. In alternate embodiments, a plurality of locking members are provided, preferably locking members that slide within a channel in the end plate. In preferred embodiments the locking member or members are spring biased toward a locking position where the locking member engages a flange of the support
930 frame to prevent the end plate from moving out of the fixed stretching position engagement member preferably has a radial receiving surface and the end plate has a radial engaging surface, which engages the radial receiving surface when the end plate pivots into the fixed stretching position.
